

2024 Farmington Drumline

Audition Information

You have taken the first steps to becoming a member of the Farmington Phoenix Marching Percussion Ensemble! We are very excited to have you as part of our team. Here at Farmington, you will make life-long friends, memories, and be a part of the ever growing legacy of the Marching Phoenix.

This packet is meant to help prepare you for your amazing experience here at Farmington. Read all provided information carefully as it is meant for your benefit!

We are here to help. Don't be afraid to reach out with any questions you may have! You can contact our percussion staff at the emails below:

Ashton Allen (Percussion Director)
farmingtonperc@gmail.com

Jake Harker (Battery Tech)
jacob.harker.8@gmail.com

Cartson Gowans (Front Ensemble Tech)
carston.gowans@gmail.com

Audition Dates:

Clinics - 04/23 & 04/25 3:30-6:00

Auditions - 04/30 3:30-6:00

PHILOSOPHY

APPROACH

- Relaxed Velocity - sound quality at all dynamic levels, speed, endurance.
- Touch - flow, articulation (tap/accents control), musicality, feel.
- Independence - knowing individual hands responsibility in rudiments, musical passages, breakdowns and quality between hands.

GRIP

- Stable, consistent and focused grip that is not too tight or too loose.
 - A good way to test this is to take two sticks and hit them together while squeezing them as hard as you can. Do you hear a thin choked off sound? Now start hitting the sticks together and gradually start to loosen your grip. Did you hear the sticks start to produce a more open tone? If you hold the stick too tightly, you dampen the stick's natural vibrations and "choke off" much of the sound, leaving you with a very thin quality. Also, the brunt of the impact from the stick striking the drum will be transferred directly into your hand, which can lead to unnecessary injury.
- All your fingers will be in constant contact with the stick, but will never squeeze or choke off the resonance of the stick.
- Snareline Traditional Grip Left Hand:
 - The fulcrum point is located between the thumb and index finger, with the thumb sitting on top of the index finger and touching the first knuckle. The connection must always be maintained. When resting the thumb on the index finger make sure the thumb is not creating any tension by pushing forward and pointing upwards. The stick will rest on the fourth finger between the first knuckle and your nail. The most important fingers in the left hand are the thumb, pointer, and ring fingers. The middle finger shares a similar role and simply mirrors the natural curve of the pointer finger. A straightened middle or pinky finger will cause unwanted tension.

STROKE TYPES

- Key Points:

- Every stroke will initiate from a wrist turn with the bead of the stick moving first. Even when playing 18 inches, a wrist turn will lift the bead before the arm rises. This wrist turn is essential to every stroke played. However, do not restrict your arms by trying to use only the wrist. As your wrist turns, your arm should naturally move. Use any combination of muscle groups (arm, wrist and fingers) to your advantage to produce any stroke. Also, there should be relaxed/rebounded weight to your stroke in order to produce a big, full sound.

- Full-stroke
 - Practice by bouncing a basketball.
 - The ball is always moving and never stops.
- Down-stroke
 - No extra tension is required. The beginning of the stroke is the exact same as the full-stroke. The only difference is after the stick strikes the head, your fingers act as a relaxed barrier, preventing the stick from rebounding past 3 inches. It is important not to over-squeeze the stick when stopping it close to the head. If properly relaxed, the skin on your forearm should have a natural jiggle. It is also important not to add extra velocity to the down stroke. A great exercise to test this is to play a measure of legato eight notes immediately followed by a measure accenting the downbeat only. Did the sound change? If so, you are probably adding extra velocity to your downstroke or squeezing the stick before it makes contact with the head.
- Up-stroke
 - Anticipating transitions is key for timing and making sure that you are using the correct muscle groups/technique for a given musical passage.

STICK HEIGHTS

Height	Related Dynamic	Angle from the Drum	Notes
1/2"	ppp	Tacet Angle	Grace Note Height
1"	pp	<0	Softest playing dynamic
3"	P	0	Default tap height. Mainly wrist, arms and fingers aid certain material
6"	mp	22.5	Default tenuto height. Mainly wrist, again arms and fingers support naturally when needed.
9"	mf	45	Arm starts to get more involved at this height. Same principles of wrist initiation apply.
12"	f	67.5	More arm, fingers open up more to aid flexibility.
15"	ff	90	Maxed wrist motion combined with open fingers (only about 1" from palm) and natural arm support.
18"	fff	112.5	Avoid "slamming"! Snares and quads will maintain 90° angle and add more arm for a more "visual volume" effect. Bases utilize more angle change for added distance from the head.

Snare Drum

8s

Musical notation for Snare Drum exercise 1, measures 1-4. The notation is in 4/4 time and consists of eighth notes. The first measure contains eight right-hand strokes (R). The second measure contains eight left-hand strokes (L). The third measure contains eight right-hand strokes (R). The fourth measure contains eight left-hand strokes (L).

5

Musical notation for Snare Drum exercise 1, measures 5-8. The notation is in 4/4 time and consists of eighth notes. The first measure contains eight right-hand strokes (R). The second measure contains eight left-hand strokes (L). The third measure contains eight right-hand strokes (R). The fourth measure contains eight left-hand strokes (L). The fifth measure contains eight right-hand strokes (R). The sixth measure contains eight left-hand strokes (L). The seventh measure contains a right-hand stroke (R) followed by a quarter rest. The eighth measure contains a quarter rest.
